Wandfluh of America has a comprehensive selection of hydraulic components with many different designs and functionality. The company is well-known for products that can be used in demanding hydraulic applications. The main focus is on spool valves, poppet valves, proportional valves, electronic components, miniature hydraulics and cartridge valve technology. The company's considerable experience in component and system design and a well thought-out modular construction system result in individual solutions that are adapted to customer requirements in the optimum way.

The range of Wandfluh product applications is extremely extensive as a result of customer-oriented, flexible market cultivation. There is hardly an industry that does not benefit from the advantages of the hydraulics and electronics of Wandfluh. The range of possible uses is

continuously expanding because of market development and specific customer requirements.

The products can be used in the following areas:

- Machine, paper, textile and plastics industries
- Construction industry
- Robotics and handling systems
- Energy production
- Offshore technology and shipbuilding
- Underwater applications
- Chemicals

Motivated staff and cutting edge technology safeguard the proverbial quality of Wandfluh services. In 1992 Wandfluh was the first Swiss hydraulics manufacturer to be awarded the QA certificate, and the company is now ISO 001:2000 certified.
